👤 SUMMARY

AWS Certified Solutions Architect – Associate and **Computer Engineering** graduate from the **Faculty of Engineering, University of Ruhuna**, with hands-on **DevOps** and **SDET** experience across **enterprise banking** and ride-hailing environments. Currently managing **staging environment** deployments at **Mitra Innovation** for **Sampath Bank**, covering **VMware Tanzu Kubernetes**, **Finacle** core banking, **Oracle WebLogic Server**, **Linux** environments, **IIS** web servers, and API publishing via **WSO2 API Manager**. Experienced in provisioning cloud-native platforms on **AWS EKS** with modular **Terraform**, implementing **GitOps** pipelines via **Argo CD** and **Kustomize**, building **CI/CD workflows** with Jenkins and GitHub Actions, and establishing observability stacks with **Prometheus** and **Grafana**. Skilled in **Docker**, **Kubernetes**, **Linux** system administration, and **GitLab/GitHub** version control workflows. Seeking a Cloud or DevOps Engineer role to drive infrastructure automation, improve deployment reliability, and contribute to scalable, cloud-native solutions.

🏢 WORKING EXPERIENCE

DevOps Engineer Intern --- Mitra Innovation | Sampath Bank

April 2026 – Present Colombo, Sri Lanka

- Executed **manual deployments on VMware Tanzu Kubernetes clusters** in a **staging environment** for enterprise banking workloads, managing containerized rollouts and verifying service health post-deployment.
- Deployed and maintained Python applications on **Linux servers**, using **nohup** to run applications as background processes.
- Managed end-to-end deployment operations on **Finacle** core banking application servers in a **staging environment**, coordinating release schedules and conducting post-deployment validations.
- Performed **manual deployments on Oracle WebLogic Server** in a **staging environment**, managing application artifact deployment, server configuration, and post-deployment validation prior to production release.
- Published and managed APIs on **WSO2 API Manager** in a **staging environment**, configuring API definitions, policies, and endpoints to enable secure and governed service exposure.
- Deployed and maintained **IIS (Internet Information Services)** web server applications in a **staging environment**, including managing application pools.

Software Development Engineer in Test Intern--- PickMe

July 2024 – March 2025 Colombo, Sri Lanka

- Independently developed and maintained test automation frameworks for the **JumJum App Price Automation** project using **TestNG**, **Maven**, **Selenium**, **Appium**, and **Java**.
- Managed a physical **device farm** for daily PickMe pricing operations in an **Agile** environment, diagnosing and resolving functional failures to maintain continuous delivery velocity.
- Integrated mobile test suites with **LambdaTest** cloud infrastructure using the **Gauge** framework and **Appium** (Android), enabling cross-device test execution as part of the **CI/CD** workflow.
- Collaborated cross-functionally with developers, QA teams, Scrum Masters, Product Owners, and Business Analysts during monthly release cycles; tracked defects via **JIRA** and monitored live app behaviour using **CleverTap**.
- Authored test plans and executed **smoke**, **sanity**, and **regression** test suites for the Passenger App Revamp; filed **JIRA** bug tickets and verified fixes, maintaining build stability across release branches.
- Documented testing practices in **Confluence** and standardized **GitLab** branching strategies.

EDUCATION

B.Sc. (Hons) in Computer Engineering

Faculty of Engineering, University of Ruhuna 

2021 – 2025 Galle, Sri Lanka

Grade: Second Class Lower Division (GPA: 3.27/4.00)

Relevant Coursework: Software Engineering, DevOps, Cloud Computing, QA, Blockchain, Cybersecurity, Networking, Operating Systems, Embedded Systems, HPC, AI, Software Architecture

CERTIFICATIONS

AWS Certified Solutions Architect -- Associate – [AWS Training & Certification, 2026](#)

Validated knowledge of designing secure, resilient, high-performing, and cost-optimized AWS solutions across compute, storage, networking, databases, security, and migration services.

Kubernetes for Absolute Beginners – [KodeKloud, 2026](#)

Covered Kubernetes architecture, Pods, Deployments, Services, ConfigMaps, and basic Kubernetes operations.

AWS Cloud Practitioner Essentials – [AWS Training & Certification, 2026](#)

Covered core AWS services and cloud concepts, including EC2, S3, VPC, IAM, security, and AWS pricing.

Docker for the Absolute Beginner – [KodeKloud, 2026](#)

Covered containerization, Dockerfiles, Docker images, containers, Docker Compose, and Docker networking.

Terraform Basics Training Course – [KodeKloud, 2026](#)

Covered Infrastructure as Code (IaC), Terraform configuration, providers, resources, variables, and basic infrastructure provisioning.

Creating Spring Boot Microservices – [LinkedIn Learning, 2026](#)

Covered Spring Boot microservice development, REST APIs, service architecture, and microservices concepts.

Java Object-Oriented Programming – [LinkedIn Learning, 2024](#)

Covered core object-oriented programming concepts in Java, including classes, objects, inheritance, polymorphism, and encapsulation.

EXPERTISE

Cloud Platforms	AWS (EC2, EKS, ECR, S3, RDS, VPC, ALB, WAF, CloudFront, Route 53, SES, KMS, ACM, IAM)
Container & Orchestration	Docker, Docker Compose, Kubernetes (K8s), VMware Tanzu Kubernetes, Argo CD, Kustomize
Infrastructure as Code	Terraform, Helm, YAML
CI/CD & GitOps	Jenkins, GitHub Actions, GitOps, Argo CD, Cloudflare, Linux, SonarQube
App Servers & API Management	Oracle WebLogic Server, WSO2 API Manager, IIS, Nginx
Monitoring & Observability	Prometheus, Grafana, Amazon CloudWatch
Version Control	Git, GitHub, GitLab
Security & Networking	WAF Rules, IAM Policies, KMS Encryption, VPC Subnets, Security Groups, SSL/TLS
Web & Backend	Spring Boot, React, Node.js, REST APIs, Microservices
Programming Languages	Java, JavaScript, Bash Scripting, Python
Databases	MySQL, MongoDB, Oracle
Quality Assurance	Selenium, Appium, TestNG, Rest Assured, Gauge, LambdaTest
Soft Skills	Team Collaboration, Problem Solving, Time Management, Adaptability, Agile

PROJECTS

Enterprise AWS EKS GitOps Microservices Platform

2026

- Provisioned a multi-environment cloud platform on **AWS EKS** using a modular, parameterized **Terraform** architecture organized into explicit sub-module layers (foundation, eks, database, registry, dns_cdn) for environment parity and reusability.
- Implemented a declarative **GitOps** continuous delivery pipeline using **Argo CD** and **Kustomize** base/overlay hierarchies across isolated staging namespaces, reducing environment configuration drift.
- Designed a **GitHub Actions CI/CD** workflow covering automated build and test, Terraform dry-run planning, and concurrent multi-image builds to **AWS ECR** with an end-to-end pipeline duration of under 4 minutes.
- Validated platform elasticity by leveraging the **Horizontal Pod Autoscaler (HPA)** to dynamically scale gateway replicas from 1 to 5 during a **326% CPU utilization** spike under simulated load.
- Deployed the **Prometheus Operator** stack with EKS Metrics Server and custom **ServiceMonitor** configurations, exposing real-time memory and quota metrics on **Grafana** dashboards.
- Configured edge routing using **Amazon Route 53**, **CloudFront CDN**, and the **AWS Load Balancer Controller (ALB Ingress)** to serve full-stack endpoints over an SSL/TLS-terminated domain.

AWS Microservices Issue Tracker with Jenkins CI/CD Pipeline

2026

- Designed and deployed a **cloud-native microservices** issue tracking application on **AWS EC2** using **Docker**, **Jenkins CI/CD**, and **Nginx** reverse proxy, demonstrating end-to-end **DevOps** pipeline ownership from code commit to production deployment.
- Architected three independent **Spring Boot** microservices: **Auth Service** (JWT authentication with **AWS SES** email verification), **Issue Service** (full CRUD), and **API Gateway** with **REST API** inter-service communication.
- Provisioned **AWS infrastructure** including **VPC**, **ALB**, **WAF**, **RDS (MySQL)**, **KMS**, **ACM**, and **IAM** policies following least-privilege security principles.
- Delivered frontend via **Amazon S3** static hosting and **CloudFront** CDN with **HTTPS** enforced end-to-end using **ACM** certificates.
- Automated the full **CI/CD** pipeline using **Jenkins** with parallel builds, **Docker** image creation, **S3** artifact upload, and rolling deployment to **EC2**.

AI-Integrated Institute Management System with Microservices

2025

- Full-stack developer on an education management system; built student, teacher, and admin dashboards with **React** and **Tailwind CSS**, and implemented barcode-based attendance verification and an AI-powered exam assistant using **RAG**.
- Designed and implemented a **CI/CD pipeline** with **Jenkins** for automated **build and deployment** to **AWS EC2** on every **GitLab** push. Containerized all services with **Docker**, configured **Nginx** as a **reverse proxy** with **SSL/TLS termination**, and integrated **Cloudflare** for DNS management and DDoS protection.

Book Fair Stall Reservation System with Microservices

2025

- Backend developer responsible for the Auth Service with **JWT-based authentication** and **role-based access control (RBAC)**. Integrated the service with an **API Gateway** and Reservation Service for secure **inter-service communication** in a **microservices architecture**.
- Containerized the entire system using **Docker** and orchestrated multi-container deployment with **Docker Compose**, enabling consistent environment parity across development and production.

Fingerprint (IoT) Attendance Tracking System

2024

- Served as frontend developer for a biometric attendance system. Built responsive user interfaces using **React** and **Material UI** to support fingerprint-based student verification.
